

*Momenta-Dose*TM AutoGenic Momentum Injector

AutoGenic Momentum Injection

The Momenta-DoseTM is an industry unique parenteral injection device as it does not use any commercial auto-injector technology such as gases, springs or any other stored kinetic energy but rather administers an injection solely by a user's applied force and subsequent momentum. The design obviates the need for intricate mechanisms, allowing the device to be produced extremely inexpensively compared to currently marketed auto-injectors. The overall cost advantages make the device more financially feasible to first time patients and patients wanting to obtain multiple devices for strategic emergency storage.

- Push-on-skin activation
- Concealed needle
- Optimized grip and control
- Injection confirmation
- Customizable design

OPTIONS**

Momenta-Dose™

Disposable AutoGenic Momentum Injector

Patient Focused

- Autogenic injection process
- Ergonomic
- Needle phobia reduction
- Specified needle depth
- Reduce injection site sensitivity
- Prevents needle sticks
- Inadvertent injection prevention
- Ideal for emergency use
- Compatible with standard syringes

Pharmaceutical Company Friendly

- Accommodates delivery volumes 0.3-1.0 mL
- Injection start after needle hits correct depth
- Entire dose delivery
- High and low viscosity compatible
- Customizable options

A user positions the device against the site of injection and applies a downward force until they exceed the calibrated amount of resistance required to initiate the injection. The activated momentum triggers two subsequent tasks; needle penetration to a pre-determined depth and the release of the device's contents. When the autogenic injector is removed from the injection site, a needle guard automatically covers and locks over the needle for safe disposal. The complete procedure occurs within seconds from a user's single motion and eliminates the need for complex instructions and multiple steps. The device simply and effectively delivers its contents intramuscularly or subcutaneously without the needle ever visible to the user.
